Fidelity Technologies Corporation designed and built the 30kW resistive Load Bank as an ideal rugged option to test and maintain Tactical Quiet Generators in the field. Designed and tested to MIL-STD-810, Fidelity’s 30kW Load Bank is built to endure harsh environmental conditions.

**Features:**
- Includes 12’, 100 Amp Pigtail
- Olive Drab Finish
- Safety Features:
  - Overvoltage Sensor
  - Temperature Sensor
  - Airflow Sensor
  - Overcurrent Protection
- Designed for Military Environment:
  - Sand and Dust
  - Corrosion
  - Fungus
  - Shock
  - Vibration
  - Military Connectors
- Wheels and Retractable Handle for Portability
- Self-Contained with Built-In Cable Storage
- Evaluates Generator Efficiency
- Prevents Wet-Stacking
- Optimized for Compatibility with PM MEP Managed Equipment
- Specifically Built for Military Applications

**Specifications:**
- Load steps in 1kW increments up to 30kW
- Input Power: 240/120VAC, Single Phase
- Class L Military Connectors
- Operating Temperature: -25°C to 55°C (-13°F to 131°F)
- Storage Temperature: -40°C to 71°C (-40°F to 160°F)
- Weight: 64 lbs

**Unit Dimensions:**
- 24.1” x 18.4” x 14.0”
